

1. INTRODUCTION

In July 1992 the 9th International Working Meeting on Soil Micromorphology was held in Townsville, Queensland. It was sponsored by Sub-Commission B of the International Society of Soil Science. One hundred and ten participants from 23 countries met to discuss recent developments in the field of soil micromorphology. David McKenzie presented a paper about his structure assessment work on cotton soils, and assisted with a post-conference tour.

This report provides details about these activities and summarises information from the meeting that is of relevance to research and advisory staff within the Australian Cotton Industry.
