

## DAQ7C Executive Summary

### AIMS:

The aims of the project are to provide a basis for sound irrigation management of cotton through studies of:

- (i) Crop response to a range of irrigation management options in terms of crop irrigation efficiency (yield per unit water applied) and plant fruiting development.
- (ii) Soil water balance in relation to irrigation application efficiency (infiltration per unit water applied), crop water use, ground-water accessions and model predictions of all these factors.
