

ANNUAL REPORT SUMMARY

Research Grant Number: MNZ2C

Feng Yu

Department of Animal Science,
Massey University, Palmerston North,
New Zealand

I have been in Australia to attend 'the 1992 Australian Cotton Conference' in Qld and to visit the Cottonseed Mill of Cargill Oilseed at Narrabri, last August. During the Conference, I presented a paper whose title is "A preliminary study on the chemical composition of Australian cottonseed and the relevance of cottonseed as a feedstuff for ruminant and monogastric livestock". The Conference brought a great chance for me to present my work and meet others involved in the cotton industry in Australia. After the Conference, I visited the cottonseed mill and CSIRO Cotton Research Unit Narrabri, and also learned a gossypol analysis method. The method has been used in the laboratory at Massey University, for analyses of the samples which were sent to me by CSIRO (Narrabri). The trip was very successful and most informative.

Finally, I would like to thank the CRDC again for awarding the grant that made my trip to Australia possible.
